Smaller transformers are called toroidal transformers and have a cylindrical or toroidal core. The shape is surrounded by wires, and the core is made of a ferromagnetic material such as ferrite, laminated iron, or iron powder. Ferrite cores are typically used in toroidal transformers operating at higher frequencies (from 10 kHz to hundreds of MHz). Many factors including simple design, high speed, high power, high torque, etc. are driving the toroidal transformer market. Additionally, advantages such as variable speed, line voltage, or modern pulse technology of adjustable speed governors may be considered as market drivers. The urbanization and industrialization of many developing countries and the huge demand for electricity are also driving the growth of the toroidal transformer market. The toroidal transformer market is also expected to expand significantly owing to growing urbanization, industrialization, and industrial automation in Asia Pacific. North America will see only moderate growth as the market matures.
