The global Torque Wrench market size is predicted to grow from US\$ 318 million in 2025 to US\$ 454 million in 2031; it is expected to grow at a CAGR of 6.1% from 2025 to 2031.

A torque wrench is a tool used to precisely apply a specific torque to a fastener such as a nut or bolt. It is usually in the form of a socket wrench with special internal mechanisms.

A torque wrench is used where the tightness of screws and bolts is crucial. It allows the operator to measure the torque applied to the fastener so it can be matched to the specifications for a particular application. This permits proper tension and loading of all parts. A torque wrench measures torque as a proxy for bolt tension. The technique suffers from inaccuracy due to inconsistent or uncalibrated friction between the fastener and its mating hole. Measuring bolt tension (bolt stretch) is more accurate but often torque is the only practical means of measurement.

Global Torque Wrench key players include Snap-on (CDI), Norbar, Proto, TONE, Tohnichi, etc. Global five top manufacturers hold a share over 50%.

North America is the largest market, with a share over 40%, followed by Europe and Asia-Pacific, both have a share over 30%.

In terms of product, Manual Torque Wrench is the largest segment, with a share over 75%. And in terms of application, the largest application is Automotive, followed by Engineering and Construction, Shipping and Aerospace, etc.
