Abstracts

The global Torsional Tuned Mass Damper (Torsional TMD) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The torsional tuned mass damper is a vibration-absorbing device that usually consists of a damper (mass block) with a large mass and springs and dampers connected to the main structure. By adjusting the mass, spring stiffness and damping characteristics of torsional TMD, structural vibration can be suppressed and controlled.

Torsional TMD can effectively reduce the resonance response of the structure, improve the stability and comfort of the structure, reduce the dynamic response of the structure when it is subjected to external excitation, and improve the stability and comfort of the structure. Torsional TMD is widely used in construction, machinery and other fields.
