The global Total Ankle Replacement market size is predicted to grow from US\$ 292 million in 2025 to US\$ 422 million in 2031; it is expected to grow at a CAGR of 6.3% from 2025 to 2031.

A total ankle replacement is an artificial joint that resurfaces both sides of the ankle joint in order to relieve pain caused by arthritis and maintain range of motion of the ankle. The ankle joint connects the leg to the foot and is made up of a cartilage covered surface at the end of the tibia (or shin) bone which joins with a cartilage covered surface on the talus (or ankle) bone. A total ankle will replace the cartilage on these two surfaces with a metal on polyethylene “bearing” surface that are firmly attached to the bone. Motion between these two joint surfaces is what allows the up and down movement of the foot.

As the population ages, there is a growing prevalence of osteoarthritis and other degenerative joint diseases. This trend leads to a higher demand for total ankle replacements as patients seek effective solutions for chronic pain and impaired mobility.

Innovations in surgical techniques, such as minimally invasive surgery and improved prosthetic designs, are making total ankle replacement procedures safer and more effective. Advanced materials (e.g., better polymers and metals) enhance the durability and functionality of implants, attracting more patients.

The increasing popularity of sports and recreational activities contributes to a higher incidence of ankle injuries and post-traumatic arthritis, driving the need for surgical

interventions, including TAR.

Increased patient awareness of TAR as a viable treatment option has led to greater acceptance. Patients are increasingly seeking interventions that restore their ability to engage in daily activities and improve their overall quality of life. Total ankle replacement offers a solution for those suffering from severe ankle pain and dysfunction.

As healthcare access improves in developing regions, more patients can receive surgical interventions for ankle problems. Emerging markets, particularly in Asia and Latin America, present significant growth opportunities for TAR.

Rising disposable incomes in urban areas and developing economies enable more individuals to afford elective surgeries. Enhanced accessibility contributes to market growth as more patients consider total ankle replacements.
