Total containment vessels (TCVs) are fully enclosed containers designed to safely secure, transport, and test explosive devices in order to protect critical assets. TCVs are used as mitigation solutions to help protect people, property, and the environment from primary and secondary fragmentation and gas that generally result from the detonation of an explosive device. Once the suspect object is contained in the chamber, the surrounding area is protected from blast effects from the explosive device. TCVs may also provide protection against chemical or radiological devices.

The global pressure vessel market is mainly concentrated in Europe and the United States, Japan and South Korea, India and China. Among them, the pressure vessel manufacturing industry in Europe, America and Japan has been in a leading position in

the international arena, mainly producing medium and high-end products in the industry. China's pressure vessel industry is big but not strong, in terms of technical strength, product quality and other aspects of the international leading enterprises there is a certain gap. Investment growth in the energy and chemical sectors has driven the development of the pressure vessel industry in recent years, including the expansion of power generation capacity in the Asia-Pacific region and the increase in chemical projects in the Middle East. According to the '2022 BP World Energy Statistics Yearbook', the global energy exporters are mainly distributed in the Middle East, Russia, Africa, South America and Central America, energy importers are mainly distributed in Europe, China, India, other Asia-Pacific countries and North America, the regional development of the pressure vessel market will be further developed with the increase in regional energy imports.
