A total dust detector is a specialized instrument designed to measure the concentration of total dust in the air. Total dust refers to all particulate matter suspended in the air, including respirable dust (particles that can be inhaled into the lungs) and non - respirable dust (larger particles that are mostly deposited in the upper respiratory tract). The detector typically uses various principles such as optical scattering, filtration and weighing, or electrostatic precipitation to accurately detect and quantify the amount of total dust in a given environment. It is widely used in industrial workplaces, construction sites, mines, and other environments where dust exposure is a concern to ensure occupational safety and health.
