Total flooding extinguishing systems are fire suppression systems designed to quickly and effectively extinguish fires in enclosed spaces. These systems work by discharging an extinguishing agent into the protected area, filling it completely to suffocate the fire. Commonly used agents include clean agents such as FM-200, Novec 1230, or inert gases like nitrogen or argon, which are non-toxic and leave no residue, making them suitable for use in occupied spaces. Total flooding systems are widely utilized in industrial, commercial, and institutional settings where rapid fire suppression is critical for safeguarding lives and property.
