The global Total Knee Implant System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Knee implants are commonly used to replace knees that have become disabled or cause pain to the patient due to normal wear and tear of the bone or due to degenerative disease. Total knee replacement involves replacing the original bone with at least two components: a femoral component to replace the distal end of the femur, and a tibial component to replace the proximal end of the tibia. The femoral and tibial components are positioned and designed to resemble the native bone and provide an articulated interface that allows for normal anatomical movement of the knee joint following implant surgery.

The global medical device market is estimated to be US\$603.3 billion in 2023, and is expected to grow at a CAGR of 5% over the next six years. At present, global health care expenditure accounts for about 10% of global GDP, and the proportion will continue to increase in the next few years. It is mainly due to the increasing demand for healthcare from an aging population, rising prevalence of chronic and infectious diseases, and expansion in emerging markets. The medical devices market plays an important role in the healthcare spending industry. The medical devices market is driven by several factors, mainly including increasing global demand for advanced medical services, advancements in medical technology, growing geriatric population, rising healthcare spending, and increasing awareness for early disease diagnosis and treatment, among others.
