The global Total Suspended Solids Probe market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A Total Suspended Solids (TSS) probe is a device used to measure the concentration of suspended solid particles in a liquid sample. It is designed to provide real-time monitoring and analysis of the amount of solid particles, such as sediment, organic matter, and inorganic compounds, present in the liquid medium.

The data obtained from TSS probes helps in assessing water quality, evaluating treatment efficiencies, complying with regulatory standards, and optimizing industrial processes. By providing real-time information on suspended solids, these probes contribute to informed decision-making and process optimization.
