Tote-to-Person solution is an advanced model of intelligent warehousing and picking system, which is widely used in automated logistics centers in e-commerce, retail, medicine, manufacturing and other industries. Its core concept is to use automated equipment to deliver the boxes or shelves storing goods to fixed picking stations, where pickers will perform picking operations, completely changing the inefficient way of workers frequently moving around the warehouse under the traditional 'person-to-goods' model. This solution usually relies on AGV (automated guided vehicle), AMR (autonomous mobile robot) or three-dimensional shelf system for box transportation, and combines WMS (warehouse management system) and WCS (warehouse control system) to achieve path planning, task allocation and efficient scheduling.
