The global Touch Screen Anti-UV (Ultraviolet) Aging Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The touch screen anti-UV (ultraviolet) aging tester is a device specially used to evaluate the durability and stability of touch screens under ultraviolet irradiation. It can simulate long-term exposure to ultraviolet light to detect the aging of the touch screen under ultraviolet light exposure, including color changes, performance degradation, etc. By using a UV light source to simulate ultraviolet rays in sunlight, the tester can simulate the effects of long-term outdoor use of a touch screen in a short time, thereby helping manufacturers evaluate the quality and reliability of their products. This kind of equipment has a wide range of applications in touch screen manufacturing, research and development, quality control and other fields.

With the widespread application of touch screen technology, especially in outdoor equipment, car navigation, mobile devices and other fields, the requirements for the UV resistance of touch screens are becoming higher and higher. This has contributed to the rapid growth of the anti-UV aging tester market. Currently, the market size is expanding and is expected to maintain a steady growth trend in the next few years.
