## Abstracts

The global Touch Screen Printing Ink market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Touch screen printing ink refers to a specialized type of ink or coating used in the manufacturing of touch screens, which are common in various electronic devices such as smartphones, tablets, kiosks, and more. These inks are formulated to meet specific requirements for touch screen technology, ensuring that they provide both functionality and visual clarity.

The transition from traditional offset and analog printing to digital printing continued to be a significant trend in the ink industry. Inks formulated for digital printing applications, such as inkjet and electrophotography, were in high demand due to their flexibility, speed, and the ability to customize print jobs. There was a growing emphasis on environmentally friendly or 'green' inks. These inks are formulated with fewer volatile organic compounds (VOCs), are biodegradable, and adhere to eco-friendly printing practices. This trend aligned with increasing awareness of sustainability and environmental regulations. UV-curable inks were gaining popularity due to their fast drying times, durability, and versatility. They were used in a wide range of applications, including wide-format printing, labels, and packaging. The Asia-Pacific region, especially China and India, was a dominant force in the global ink market due to the high level of manufacturing and increasing consumer demand.
