The global Touchless Hand Disinfectant Dispensers market size is predicted to grow from US\$ 56.3 million in 2025 to US\$ 68.5 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

The non-contact hand disinfectant dispenser is able to dispense sanitizer in a non-contact way. The device detects the hand through the sensor and dispenses the sanitizer, which can help effectively reduce bacteria and kill microorganisms, and control the spread.

Hand sanitizer dispensers are devices that dispense hand sanitizer in liquid, gel, or spray form. Rising health concerns amid the COVID-19 pandemic is one of the major determinants driving the growth of the global hand sanitizer dispenser market. In addition, the implementation of government regulations regarding hand sanitization in public places is also driving the growth of the market. Sudden surge in demand for hand sanitizer dispensers has resulted in the entry of numerous new market players. The hand sanitizer dispenser market is expected to grow at the highest CAGR during the forecast period in Asia Pacific. The COVID-19 outbreak has led to a huge spike in hand sanitizer sales. People have taken various precautions, such as using face masks, hand sanitizers, taking immune-boosting supplements, etc., to keep themselves from getting infected. As governments across the region eased some of the lockdown restrictions, various shops and offices opened for business, boosting demand for hand sanitizer dispensers significantly.
