The tourbillon was invented by the famous Swiss watchmaker Abraham Breguet in 1795 and is a device in a mechanical watch movement. The design of the tourbillon device itself is used on the pocket watch, because when the pocket watch is placed vertically in the pocket or hung on the neck, the gravity will affect the swing speed of the balance wheel, causing errors.

The principle of the tourbillon is basically to design the balance spring, fork lever and escapement system to operate on the same axis. The tourbillon will continuously rotate during operation to reduce the effect of gravity.

However, with the rise of watches in the twentieth century, because the watches are not placed vertically for a long time, the effect of the tourbillon device on the watch is not as great as that of the pocket watch. Therefore, the tourbillon has become synonymous with high-end watches.

German watchmaker Alfred Helwig, invented the second generation tourbillon watch in 1927, remove the flywheel fixing bracket, called 'flying tourbillon'.

Hong Kong watchmaker Jiao Dayu invented the third generation tourbillon watch at Tianyixuan in Hong Kong in 1991 and obtained a patent in 1993. He not only removed the flywheel fixing bracket, but also removed the flywheel rotating frame, and modified the balance wheel splint, which greatly reduced the weight of the tourbillon, enhanced stability, and more artistic beauty. His tourbillon watch is called 'Kiu 's Mystery Tourbillon', also known as 'Chinese Tourbillon'.

The tourbillon watch is known for its extreme precision. Before the world of quartz

watches and electronic surfaces, the tourbillon watch was claimed to only run for one second for several decades, which is the ultimate timepiece.
