Tourmaline ceramic balls, also known as tourmaline balls, tourmaline ceramicsite, tourmaline activated balls, tourmaline mineralized balls, etc., are an emerging material obtained by molding, sintering and other processes using tourmaline, high-quality clay (or food-grade clay) and other basic materials. Its main materials include tourmaline, clay (or clay) and possible other basic additives. These materials are carefully proportioned and processed to form spheres with specific functions and properties. Tourmaline ceramic balls can adsorb and decompose organic matter in water, absorb harmful metal ions, and convert them into harmless substances, thereby purifying water quality. In the health field, tourmaline ceramic balls are used to make various health products, such as bathtub balls, water cups, etc., which are said to improve water quality and promote human health.

The global Tourmaline Ceramic Balls market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
