Tourniquet systems are medical devices which apply circumferential pressure to a limb in order to temporarily occlude venous and arterial circulation to that particular extremity. This allows the tourniquet system to block the blood flow to a limb, thereby creating a bloodless field.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical
