A tow hook is a mechanical connection device installed at the front and rear of a vehicle chassis or frame. It provides a reliable connection point for the tow rope, trailer boom, or trailer hitch when the vehicle breaks down, gets stuck, or requires towing. This device typically consists of a high-strength steel tow hook, mounting bracket, and fixing bolts, capable of withstanding significant tensile loads. It is widely used in passenger cars, SUVs, engineering vehicles, off-road vehicles, and military vehicles. In practical applications, tow hooks are primarily used for short-distance vehicle rescue towing or towing operations. Unlike trailer couplers or trailer ball joints used for continuous towing, their design focuses on high-strength instantaneous traction and structural reliability. Sales in 2025 were 1.75 million units, with an average price of \$420 per unit, total production capacity of 2 million units, and a gross profit margin of 33%.
