T&P relief valves, or temperature and pressure safety valves, are installed on water heaters and pressure vessels. They automatically release water when temperature or internal pressure exceeds preset limits, preventing tank rupture and ensuring user safety. These valves are essential protective components in hot water systems.

In 2024, global T&P Relief Valves production reached approximately 30 million units, with an average global market price of around US$8 per unit. The typical single-line production capacity for this product is approximately 800,000 to 2 million units. The industry's gross profit margin is approximately 15%–25%. Metal raw materials such as copper alloys and stainless steel account for the largest portion of the cost structure (approximately 50%–60%). The upstream suppliers of this product are copper, stainless steel, engineering plastics, springs, and seals. The downstream suppliers primarily serve domestic and commercial water heater manufacturers, pressure vessel manufacturers, and the aftermarket replacement and repair market.
