The global TPT Back Sheet market size is predicted to grow from US\$ 604 million in 2025 to US\$ 975 million in 2031; it is expected to grow at a CAGR of 8.3% from 2025 to 2031.

TPT (polyvinyl fluoride composite film) is used as a back protective encapsulation material on the back of the custom solar panel. The thickness is 0.17mm, the longitudinal shrinkage is not more than 1.5%, and the TPT used for encapsulation should have at least three layers: the outer protective layer PVF has good environmental corrosion resistance, the middle layer is polyester film, has good insulation performance, inner layer PVF requires surface treatment and EVA has good bonding properties. Tedlar used for encapsulation must be kept clean and free from dust or moisture. In particular, the inner layer must not be in direct contact with the fingers to avoid affecting the adhesion strength of the EVA. The TPT backsheet is made of PVF (polyvinyl fluoride film)-PET (polyester film)-PVF three-layer film backing film, referred to as TPT for short; TPT has a three-layer structure: the outer protective layer PVF has good environmental corrosion resistance. The middle layer is a polyester film with good insulation properties, and the PVF inner layer has good adhesion to surface treatment and EVA. The TPT must be kept clean and free of dirt or moisture, especially if the inner layer is not in direct contact with the fingers to avoid affecting the adhesion to the EVA.
