Tracer Wires are slender metal wires used for locating underground pipes and cables, usually made of copper or aluminum. They are buried around underground facilities such as water pipes, natural gas pipelines, power cables, etc. to help maintenance personnel quickly find these underground facilities if they need to be repaired, maintained or located.

Tracer Wires play a key role in underground wiring and pipeline management. By guiding current in underground structures or using corresponding detection equipment, maintenance personnel can track the location of tracer wires to accurately locate and access buried pipelines or pipes. Cable system. This helps increase efficiency and lower maintenance costs while reducing unnecessary damage and excavation.
