The global Tracheostomy market size is predicted to grow from US\$ 196 million in 2025 to US\$ 247 million in 2031; it is expected to grow at a CAGR of 3.9% from 2025 to 2031.

Tracheostomy Tube is inserted through a surgical opening (stoma) of the trachea to secure an airway during breathing, ventilation or weaning.

A commonly used tracheostomy tube consists of three parts: outer cannula with flange (neck plate), inner cannula, and an obturator. The outer cannula is the outer tube that holds the tracheostomy open. A neck plate extends from the sides of the outer tube and has holes to attach cloth ties or velcro strap around the neck. The inner cannula fits inside the outer cannula. It has a lock to keep it from being coughed out, and it is removed for cleaning. The obturator is used to insert a tracheostomy tube. It fits inside the tube to provide a smooth surface that guides the tracheostomy tube when it is being inserted.

Global Tracheostomy key players include Medtronic, Teleflex Medical, Smith's Medical, TRACOE Medical, etc. Global top four manufacturers hold a share over 65%.

North America is the largest market, with a share over 30%, followed by China, and Europe, both have a share over 35 percent.

In terms of product, PVC Tracheostomy Tube is the largest segment, with a share over 65%. And in terms of application, the largest application is Therapy, followed by Emergency Treatment.
