A track idler is a component used in tracked vehicles, such as tanks, bulldozers, and other heavy machinery, to support the track and allow it to move smoothly around the vehicle's suspension system. The idler is typically located at the front or rear of the vehicle and is one of several components that make up the track support system, which also includes drive sprockets, track links, and roller wheels. Track idlers are designed to be robust and durable, as they are subject to significant forces and wear during the operation of tracked vehicles. They are often made from steel or other heavy-duty materials and may be equipped with bearings to reduce friction and allow for smoother movement of the track. In some cases, idlers may be designed to be replaceable or serviceable to facilitate maintenance and repair.
