The global Traction Manure Scraper market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A tractor-type manure scraper is a mechanical device used to clean manure in livestock and poultry farms (especially chicken houses). It is connected to the excrement truck through a traction device such as a chain or a wire rope, and uses an electric motor or hydraulic motor to provide power to scrape the excrement on the ground with the scraper and transport it away. This kind of equipment has the advantages of simple structure, easy operation, good manure cleaning effect, strong adaptability, etc., and is suitable for livestock and poultry farms of various sizes and types. The tractor-type manure scraper can greatly improve the efficiency of manure cleaning work, reduce the labor intensity of manual manure cleaning, save time and labor costs, and at the same time help maintain the environmental hygiene of livestock and poultry houses, reduce bacterial growth, and reduce the risk of disease transmission. Improve the health level and production efficiency of livestock and poultry.
