The traction power supply system provides the necessary electricity for urban rail operations. It not only provides traction electricity for trains, but also provides electricity for other facilities serving rail transit operations, such as lighting, ventilation and air conditioning, water supply and drainage, communication signals, disaster prevention alarms, and escalators. In the operation of urban rail transit, once the power supply is interrupted, it not only causes the paralysis of urban rail transit transportation, but also endangers the safety of passengers and causes property damage. Therefore, a highly safe, reliable, and economically reasonable power supply is an important guarantee and prerequisite for the normal operation of urban rail transit.

The global Traction Power Supply for Rail market size is projected to grow from US\$ 2577 million in 2024 to US\$ 3249 million in 2030; it is expected to grow at a CAGR of 3.9% from 2024 to 2030.
