Traffic Aggregators refer to systems, platforms, or services that collect and consolidate traffic data from various sources into a centralized location. These aggregators are commonly used in industries related to transportation, logistics, telecommunications, and digital marketing. The primary purpose of traffic aggregators is to provide a comprehensive, real-time view of traffic conditions or web traffic by combining data from multiple streams.

Traffic aggregators bring together traffic from TAPs (test access points) and SPANs ports (switched port analyzers) across the network, giving a pervasive view into information-in-motion, and optimize monitoring tools by filtering on traffic that matters.

Traffic aggregators are typically known as physical visibility node appliances, but in this world of digital transformation we are seeing more and more virtual appliances.
