Traffic Signal Heads are core front-end devices in road traffic management systems, using red, amber, and green visual signals to control the right of way for vehicles, cyclists, and pedestrians. Modern Traffic Signal Heads typically adopt high-brightness LED modules, modular housing structures, and standardized interfaces, enabling integration with traffic controllers, detectors, and intelligent transportation platforms for use in urban intersections, pedestrian crossings, highway ramps, bus priority corridors, and smart traffic systems. In 2025, Global Traffic Signal Heads shipments are estimated at about 14.8 million sets, with an average ex-factory price of about US\$210/set, and a gross margin range of about 28%-38%. The Traffic Signal Heads industry chain starts with LED chips and packages, drivers, lenses, polycarbonate housings, metal structural parts, and wiring components, continues through optical design, module manufacturing, and final assembly, and ends with traffic authorities, traffic engineering contractors, and intelligent transportation system integrators.
