## Abstracts

The global Trailer Electronic Braking System market size is predicted to grow from US\$ 1497 million in 2025 to US\$ 2442 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Trailer Electronic Braking Systems (EBS) are electronically controlled braking architectures for trailers that replace or enhance conventional pneumatic braking by using sensors, an electronic control unit, and modulators to deliver faster response, improved stability, and advanced safety functions such as ABS integration, brake force distribution, and roll stability support. In 2025, the average global unit price of trailer EBS is approximately US\$680 per system, with global annual sales volume estimated at around 2.25 million systems. The industry typically maintains a gross margin range of 30%–50%, supported by functional safety requirements, software value, system integration complexity, and regulatory compliance. The supply chain includes upstream ECUs, pressure sensors, wheel-speed sensors, modulators, wiring harnesses, and pneumatic components; midstream manufacturers focus on system design, embedded software, calibration, validation, and homologation; downstream customers include trailer OEMs, fleet operators, retrofit markets, and commercial vehicle integrators.
