## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The on-board power source and external power source provides power to the train where the external power source system is an electric system. In an electric system, the train accumulates electrical current from sliding contact of the power supply line. The electric locomotive collects electrical energy from the overhead line, and current passes through transformer to provide power for the electric motor through a power control unit.
