## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Transaction reporting is demanded of financial institutions by multiple regulatory regimes, with the goal of detecting suspected market abuse or money laundering. To comply, firms need to ensure their systems are able to deliver complete and accurate information about the financial instrument traded, the firm undertaking the trade, the buyer and seller, and the date and time of the trade to be reported to the regulatory authority.

Transaction reporting is not to be confused with trade reporting, which is conducted in real time for the purpose of ensuring transparency and fairness in the market and made public, while transaction reporting can be done in T+1 days and the information is not made public.

Transaction reporting software solutions are crucial to complying with several capital markets regulations, such as MiFID II/MiFIR, EMIR, REMIT and SFTR in the UK and Europe; CAT/OATS and CFTC reporting in the US; and regulations mandated by MAS, ASIC and HKMA in the APAC region.
