Transcatheter Mitral Valve Intervention (TMVI) refers to a minimally invasive procedure aimed at treating mitral valve disorders through catheter-based techniques rather than open-heart surgery. During TMVI, specialized catheters are guided through blood vessels to access the heart, where the mitral valve is repaired or replaced using various methods such as valve repair devices or transcatheter valve implants. This approach offers advantages like reduced recovery time, fewer complications, and potential options for patients deemed high-risk for traditional surgical interventions.

The global Transcatheter Mitral Valve Intervention market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
