## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Transcatheter pacing system is a small implantable device which sends electric pulses to the heart when the heart rhythm slowed down. It is a minimal invasive procedure. It is a novel technology whereby no leads are being used in the transcatheter pacing system and thus it can be implanted directly into the right ventricle. In transcatheter pacing system, the pacing, generator and sensing electrodes are incorporated in one capsule-shaped compartment which is implanted directly in the right ventricular wall. The cathode is located on the distal end of the pacemaker. Transcatheter pacing system are smaller in size as compared to conventional transvenous pacemakers. Physicians mostly preferred to use transcatheter pacing system since it eliminates the potential complications and risk of pacemakers and hence the transcatheter pacing system is likely to propel the growth of the market.
