The global Transcriptomics market size is predicted to grow from US\$ 4462 million in 2025 to US\$ 8068 million in 2031; it is expected to grow at a CAGR of 10.4% from 2025 to 2031.

Transcriptomic incorporates the exploration and assortment of transcriptomes and finds diverse applications, chiefly in molecular genetics. The global transcriptomic market could see a whole lot of instances of new product launch. For example, Trio RNA-Seq launched by NuGEN Technologies, Inc. is particularly suited for low abundance transcripts applications as it offers an extremely sensitive whole transcriptomic solution. This innovation embodies three powerful technologies, viz. single primer isothermal amplification (SPIA), DimerFree, and AnyDeplete, for performing high sensitivity ribonucleic acid (RNA) analysis.

North America is the largest consumption place, with a consumption market share nearly 55% . Following North America, Europe is the second largest consumption place with the consumption market share of 25% .The key manufacturers are Thermo Fisher Scientific, Illumina, QIAGEN (Exiqon), Agilent Technologies, Roche, GE Healthcare, Bio-Rad Laboratories, Fluidigm etc. Top 3 companies occupied about 41% market share.
