In 2025, the global production of transformer chromatography online monitoring systems reached 10,483 units, with an average selling price of 15,000 USD per unit. The global annual production capacity of transformer chromatography online monitoring systems is approximately 15,000 units, and the gross profit margin is about 28.3%. A transformer chromatography online monitoring system is a device specifically used to monitor the gas composition in transformer oil. This type of system is mainly used in the power industry to help detect and analyze possible faults inside transformers. The upstream of transformer chromatography online monitoring systems includes gas sensors, precision amplifiers, chromatography columns, etc. The midstream consists of manufacturers of transformer chromatography online monitoring systems, and the downstream is mainly applied in industries such as electrical, mechanical, and energy.

Currently, the global market for transformer chromatography online monitoring systems is in a steady growth phase, mainly driven by the increasing demand for safe operation and predictive maintenance of power equipment. With the accelerating adoption of smart grids and digital substations, users have raised higher requirements for real-time performance, accuracy, and the ability to simultaneously analyze multiple gas components in online monitoring systems. Meanwhile, the penetration of these systems is expanding in application scenarios such as new energy grid integration, retrofitting of aged equipment, and long-distance power transmission. Market competition is gradually intensifying, with manufacturers generally focusing on improving product operational stability, reducing long-term maintenance costs, and enhancing intelligent data

diagnostic capabilities. Regionally, the market drivers in developed regions primarily stem from refined asset management and life-cycle assessment of existing equipment, while emerging economies present considerable incremental opportunities due to large-scale power infrastructure construction. Overall, the industry is moving towards integration, intelligence, and low power consumption.
