Abstracts

The global Transformer Condition Monitoring System market size is predicted to grow from US\$ 3178 million in 2025 to US\$ 5832 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

The growth of the power transformer monitoring system market is primarily driven by rising energy consumption due to population boom in emerging economies. Moreover, the ongoing installation of high-power transmission installations and upgrades of power transmission systems will contribute to this growth. The transformer monitoring system market accounts for 3% to 5% of its parent market, the transformer market.

Automation, big data analytics and the Internet of Things (IoT) are critical in today's highly industrialized and evolving industrial environment. Planning downtime and actually monitoring various parameters of transformers may seem obsolete for distribution companies today.

This new technology enables easy monitoring of several common operating parameters of transformers from the IT unit or office. Transformers effectively convert higher transmission voltages to lower distribution voltages.
