The global Transglutaminase for Food market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Transglutaminase is an enzyme that is used in the food industry as a binding agent, to improve the texture, shelf life, and appearance of food products. It is also known as meat glue or TG enzyme. Transglutaminase is a naturally occurring enzyme that is found in many organisms, including humans. However, the enzyme used in the food industry is typically produced using bacteria or fungi. Transglutaminase is commonly used in meat products such as ham, sausage, and chicken nuggets, as well as in seafood, dairy, and bakery products. It can help to improve the texture of these products by creating a stronger bond between the proteins in the food, which can result in a more tender and cohesive product. Transglutaminase can also be used to create new food products, such as vegetarian meat substitutes, by binding plant proteins together.

The global food industry has been experiencing a shift toward innovative and value-added food products. Transglutaminase, as a food enzyme, offers several functional benefits that align with these trends. It has found applications in various segments of the food industry, such as processed meats, seafood, dairy products, bakery items, and convenience foods. The growing demand for processed and convenience foods, especially in urban and busy lifestyles, is driving the use of Transglutaminase to enhance texture and convenience. Asia-Pacific has a well-established food processing industry and a strong tradition of using food enzymes. Growing urbanization and changing dietary habits are driving the demand for processed and convenience foods, contributing to the adoption of Transglutaminase. The clean label movement and demand for innovative food products have driven the use of Transglutaminase in North

America. Stringent food regulations and consumer demand for natural and clean label products have fueled the use of Transglutaminase in various food applications in Europe.
