The research report highlights the growth potential of the global Transglutaminase market. Transglutaminase are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Transglutaminase. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Transglutaminase market.

Transglutaminase is an enzyme that catalyzes the formation of isopeptide bonds between proteins.

Its cross-linking property is widely used in various processes: to manufacture cheese and other dairy products, in meat processing, to produce edible films and to manufacture bakery products. Transglutaminase has considerable potential to improve the firmness, viscosity, elasticity and water-binding capacity of food products.

At this stage, the production technology is mainly microbial fermentation method. And Ajinomoto is the first enterprises to achieve commercial production with microbial fermentation method in the end of 1980s.

Global Transglutaminase main manufacturers include Taixing Dongsheng, Yiming

Biological and Ajinomoto, totally accounting for 79% of the market. Europe is the largest market, with a share over 36%. As for the types of products, it can be divided into less than 100 U/g, 100 U/g – 200 U/g and more than 200 U/g. The most common type is 100 U/g – 200 U/g, with a share over 49%. As for the types of application, it is widely used in meat field, fish field, dairy field, flour field and others. The most common application is fish field, with a share over 23%.
