A Transition Coupler is a device used to connect two different types of transmission media, interfaces, or structures—such as coaxial to waveguide, or single-mode to multimode fiber—while ensuring efficient signal, power, or data transfer with minimal loss or distortion. It plays a key role in impedance matching, signal coupling, and mode conversion across different systems. Commonly used in RF and microwave systems, fiber optics, and high-speed electronic circuits, transition couplers help maintain signal integrity when bridging components with differing physical or electrical characteristics.
