A translation sprinkler is a piece of equipment used for agricultural irrigation. It can automatically move on the field and perform sprinkler irrigation operations. This type of machine usually consists of a frame, irrigation system, moving unit and control system. Translational sprinklers can move along tracks or rails in a field to ensure that the entire field is irrigated evenly. This kind of equipment is usually used in large farmland or orchards, which can help farmers save time and labor costs and improve irrigation efficiency. They can perform automated irrigation according to the water needs of plants and soil moisture conditions, thereby ensuring that plants receive the appropriate amount of water and improving crop yield and quality. Translational sprinkler irrigation machines have been widely used in modern agricultural production.
