The global Transmission Compressor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A reciprocating compressor is a positive-displacement machine that uses a piston to compress the gas and deliver it at high pressure.

These compressors are also called as piston compressors. They are often some of the most critical and expensive systems at a production facility and deserve special attention. Reciprocating compressors are used for applications such as gas transmission pipelines, petrochemical plants, refineries, and many other industries. They are typically used where high compression ratios (ratio of discharge to suction pressures) are required per stage without high flow rates, and the process fluid is relatively dry.
