## Abstracts

The global Transmission and Distribution Facility Testing Services market size is predicted to grow from US\$ 768 million in 2025 to US\$ 1094 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

To address the challenges inherent in traditional power transmission and distribution (T&D) facilities?specifically, the reliance on power outages for maintenance testing (leading to supply interruptions), the high rate of missed inspections during manual patrols, and the difficulty in providing early warnings for latent defects?specialized T&D facility testing services have emerged. Since the large-scale deployment of smart grid technologies and live-line inspection equipment, the field of power equipment condition assessment has experienced significant growth. Today, T&D facility testing services have evolved into a comprehensive system encompassing various disciplines?including insulation resistance testing, partial discharge detection, loop resistance measurement, infrared thermal imaging diagnostics, ground continuity verification, and protective relay calibration. Widely applied across transmission lines, distribution transformers, switchgear, cable ducts, and lightning arrester systems, this professional technical service framework enables the precise assessment of equipment health, the prevention of sudden outage failures, and the extension of facility service life.
