According to our LPI (LP Information) latest study, the global Transmission Oil Pump market size was valued at US\$ million in 2023. With growing demand in downstream market, the Transmission Oil Pump is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Transmission Oil Pump market. Transmission Oil Pump are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Transmission Oil Pump. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Transmission Oil Pump market.

Transmission oil pumps provide fluid pressure for the transmission or torque converter, wherein the valve body regulates, controls, and directs the flow of pressurized transmission fluid. Variable displacement pump like axial piston pump save energy by decreasing output, without affecting the speed, whereas, fixed displacement pumps, such as gear pumps, bent axis pumps, and screw pumps, sometimes provide unneeded pressure.

The global transmission oil pump market is driven by growth in demand for automatic cars, rise in preference for automation by inexperienced drivers, and increase in traffic congestion in developing and developed countries. However, the fast adoption of automated manual transmission (AMT) in commercial vehicles and low mechanical

efficiency of automatic transmission are expected to hinder the growth.
