Cellophane is a thin, transparent sheet made of regenerated cellulose. It is also called cellulose film. Cellulose film is derived from natural cellulose with raw materials such as wood pulp and cotton pulp, by the chemical process of alkalization, xanthation and casing etc. It is different from common paper in its good softness and transparency. It is just like glass. Its low permeability to air, oils, greases, bacteria, and water makes it useful for food packaging, tobacco packaging, pharmaceutical packaging and cosmetic packaging among others.
