Transparent orthodontic dental braces are nearly invisible teeth correction devices made of advanced materials, usually made of medical-grade transparent plastic or polymer, which can fit the patient's tooth shape to achieve gradual movement and adjustment of tooth position. Compared with traditional metal brackets, transparent braces are beautiful and comfortable, easy to remove and clean, and reduce oral irritation. They are widely used in the correction of mild to moderate tooth misalignment, large gaps or abnormal bites. With the help of digital scanning, 3D modeling and computer-aided design technology, transparent orthodontic braces can tailor personalized treatment plans for patients, significantly improve correction effects and patient experience, and promote the development of modern orthodontics in the direction of minimally invasive, precise and beautiful.
