Transparent PV Frontsheet is a lightweight, flexible, and durable polymer-based film—typically made from materials like ETFE, FEP, or specialized PET—used as a protective, transparent, and high-transmittance outer layer in solar modules, often replacing glass to improve efficiency and enable flexible or portable applications. They provide superior UV stability, hydrolysis resistance, and weatherability.

In 2025, global production of Transparent PV Frontsheet reached 48.5 million square meters, with an average selling price of USD 5.5 per square meter. Total installed capacity was approximately 70 million square meters, and the industry gross margin was about 15%–25%.

Cost structure: raw materials accounted for about 70%, manufacturing overhead about 23%, and labor costs about 7%.

Industry chain: upstream consists of suppliers of fluorinated polymer monomers, polyester monomers, glass fiber, and other raw materials, while downstream consists of manufacturers of lightweight photovoltaic modules.
