Transvaginal Endoscopy (TVE), a combination of hysteroscopy and transvaginal hydrolaparoscopy, is a revolutionary technique used for direct visualization and assessment of the entire female reproductive system. The procedure is done under light sedation with only one needle puncture to enter the abdomen through the vagina and behind the uterus. A Normal Saline solution, instead of CO2 gas, is used to visualize the entire female pelvis directly. Post-operative recovery is fairly quick, with most patients feeling back to normal within hours.
