The global Trapezoidal Screw market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A trapezoidal screw is a type of lead screw characterized by its trapezoidal-shaped thread profile, which has a thread angle typically set at 30 degrees. The screw's geometry provides a balance between load-carrying capacity and smooth motion, making it ideal for converting rotational motion into linear motion in mechanical systems.

Trapezoidal screws are commonly used in applications that require high precision, durability, and the ability to handle large axial forces. They are often found in machine tools, lifting mechanisms, and linear actuators due to their efficient transmission of forces and self-locking capability, which prevents back-driving under load without the need for brakes or motors.

United States market for Trapezoidal Screw is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Trapezoidal Screw is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Trapezoidal Screw is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Trapezoidal Screw players cover THK, Thomson, Barnes Industries, SCREW TECHNOLOGY, Igus, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
