The global Trash Ducts market size is predicted to grow from US\$ 1444 million in 2025 to US\$ 1884 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

Trash Ducts are a type of ductwork found in industrial facilities. These ducts collect and process waste from factories, warehouses, and other industrial facilities. They are used to transport waste from one place to another.

The disposal of kitchen waste mainly relies on garbage disposers, and policy enforcement is an important factor in its popularity. China's current penetration rate of food waste disposers is less than 0.1%, and it is still in the early stages of popularization. With the implementation of garbage classification and policy support, residents' demand for food waste disposers has been further released, and the market prospects are broad.
