The global Tri Nonyl Phenyl Phosphite market size is predicted to grow from US$ 141 million in 2025 to US$ 174 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

Tri Nonyl Phenyl Phosphite is an excellent secondary antioxidant (from the phosphite family). It improves the material's heat resistance and oxidation resistance by decomposing hydroperoxides and inhibiting oxidative degradation, while also preventing yellowing, resinification, and gel formation. Global production in 2024 was estimated to be approximately 50,000 tons, with an average selling price of $2,800 per ton.

The production of trinonylphenyl phosphite (TNPP) requires phosphorous acid or phosphorus trichloride and nonylphenol as primary raw materials. It is produced through an esterification reaction between phosphorous acid and nonylphenol. The market price and supply stability of these raw materials directly impact the production cost and yield of TNPP. Its downstream customers primarily include plastics, rubber, and coatings processing companies, with typical applications including polyolefins (PE, PP), PVC, and ABS. Driven by stricter regulations and the development and promotion of green alternatives, the market is gradually shifting toward environmentally friendly, nonylph
