The global Triangular Spiral Packing market size is predicted to grow from US\$ 61.14 million in 2025 to US\$ 85.95 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global sales of triangular spiral packing reached 1.42 million units, with an average selling price of US\$42 per unit. Triangular spiral packing is a highly efficient structured packing used in distillation, absorption, and scrubbing towers. Its triangular cross-section and spiral channel design provide a large specific surface area, low pressure drop, and enhanced mass and heat transfer performance. Upstream raw materials mainly consist of stainless steel plates, polypropylene (PP)/polytetrafluoroethylene (PTFE) plastics, and surface coating materials. Representative suppliers include Baosteel, POSCO, SABIC, and DuPont. Downstream suppliers primarily serve petrochemical, fine chemical, natural gas processing, pharmaceutical, and environmental desulfurization projects. End customers include BASF, Shell, Sinopec, and CNPC. Global total capacity is approximately 1.8 million units per year, with an average industry gross margin of approximately 24%-30%. Downstream consumption breakdown shows that chemicals and refineries account for approximately 40%, natural gas and gas separation for 30%, pharmaceuticals and environmental protection for 20%, and others for 10%. Upstream material consumption includes approximately 60% metal materials, 30% engineering plastics, and 10% surface treatment and auxiliary materials. The future path lies in the development of corrosion-resistant and high-temperature materials, 3D printing and CFD optimized structures, low-pressure-drop and high-efficiency designs, and composite adsorption/catalytic functions to meet the demands of higher energy efficiency and more stringent working conditions.

The triangular spiral packing market is experiencing steady growth, driven by the increasing demand for energy efficiency in chemical separation processes and increasingly stringent environmental regulations. This product, with its high specific surface area, low pressure drop, and excellent liquid distribution performance, is widely used in petrochemical, fine chemical, pharmaceutical, and waste gas treatment industries. Currently, the market is mainly concentrated in the Asia-Pacific region, particularly in China, India, and South Korea, where new and expanded chemical projects have significantly increased the demand for high-efficiency packings. The European and American markets primarily focus on replacing traditional random packings, emphasizing energy conservation and compact equipment. In the competitive landscape, international companies maintain their technological and patent advantages, while domestic manufacturers are gradually expanding their market share through low-cost manufacturing and customized solutions. Future market development will focus on composite material packings (such as stainless steel and PTFE blends) and digital optimization of structural parameters to meet the process requirements of more complex reaction systems and higher separation efficiency. Simultaneously, with the rise of green chemistry and carbon capture and storage (CCUS) industries, triangular spiral packing is expected to find new growth opportunities in low-carbon distillation and absorption processes.
