The global Triaxial Gaussmeter market size is predicted to grow from US\$ 743 million in 2025 to US\$ 1476 million in 2032; it is expected to grow at a CAGR of 10.5% from 2026 to 2032.

A triaxial Gaussmeter is an instrument for measuring the Earth's magnetic field. It is usually composed of three magnetic field sensors, which are installed on the x, y, and z axes respectively. It can measure magnetic field data in three directions at the same time. These sensors convert magnetic induction intensity into electrical signals through Hall elements, and then amplify, filter, and process them before finally outputting them as digital signals. Since the sensors on the three axes can work simultaneously, the triaxial Gaussmeter can output magnetic field data in three directions in real time.

With the development of science and technology and the continuous expansion of industrial applications, the market demand for three-axis Gaussmeters has shown a steady growth trend. Especially in the fields of earth science, mineral exploration, earthquake monitoring, etc., the application of three-axis Gaussmeters is becoming more and more extensive, and the market potential is huge.
